EDUCATION

Carnegie Mellon University **Expected May 2027**
M.S. in Software Engineering | GPA: 4.0 / 4.0
Selected Coursework: Foundations of Software Engineering, Software Refactoring, Distributed Systems

University of Wisconsin–Madison **May 2024**
B.S. in Computer Science & B.S. in Computer Engineering | GPA: 3.72 / 4.0
Selected Coursework: Operating Systems, Computer Architecture, Data Structure & Programming III

WORK EXPERIENCE

NewsBreak **May – August 2026**
Software Engineering Intern *Mountain View, CA*

- Shipped SportsBreak to the App Store as the team's sole SwiftUI engineer and primary backend author; the app reached ∼6,000 installs and 1,119 peak daily active users.
- Built server-driven UI over 27 widget types so new surfaces ship without an App Store release; shipped ActivityKit Live Activities with one scoreboard module shared by the app and widget.
- Found why Live Activity push-to-start never worked: iOS silently drops a start push with no `aps.alert` while APNs still returns HTTP 200; fixed it by raising on the sender.
- Cut the World feed from 25–30 client requests to one backend call, and fixed a cache that never hit because it was keyed per user (13.2 MB each) by sharing one 10.9 MB copy as the pod neared its memory limit.
- Root-caused missing ad fill to the linker dead-stripping mediation adapters loaded via `NSClassFromString`, and proved the `-ObjC` fix with a +7.5 MB binary delta and 0 → 2 adapter symbols.
- Built the FastAPI and MongoDB backend from its first commit to 89 REST endpoints, with ∼1,450 offline tests gating every merge in CI; wrote 34 contract-first API specs ahead of implementation.

Haddee Education **June – September 2025**
Engineering Lead *San Diego, CA*

- Led an 8-intern team through Agile sprints to ship a React, Next.js, FastAPI, and Supabase web app on GCP App Engine; designed the database schemas and REST APIs.
- Broke down user stories, led PR reviews, and mentored interns on Git workflows, testing, and scalable code.

ZenAI — MiraclePlus (Formerly YC China) F23 **September – December 2023**
Full Stack Developer *Beijing, China*

- Built the LLM mock-interview web app from 0→1 as sole engineer in React, Next.js, and Supabase; iterated scoring and UI from user testing.
- Demoed the product and iterated with clients until three 200–500-person companies signed contracts.

RESEARCH EXPERIENCE

Control & Learning Group — Carnegie Mellon University **February – June 2026**
Graduate Researcher | Advisor: Prof. Yorie Nakahira

- Developed an Online Adaptive Probabilistic Safety Certificate (PSC) with PhD researchers; outperformed Adaptive MPC in 3-DOF vehicle simulations with LuGre tire models under extreme conditions including ice.

SKILLS

Languages	C, Java, Swift, Python, Go, TypeScript, JavaScript, SQL, Bash
Mobile & Practices	SwiftUI, Xcode, ActivityKit, WidgetKit, Git, Unit Testing, Agile/Scrum, Jira, CI/CD
Backend & Cloud	FastAPI, MongoDB, PostgreSQL, AWS, GCP, Kubernetes (EKS), Docker, Linux
Certifications	AWS Certified Solutions Architect – Associate, AWS Certified Cloud Practitioner

PROJECTS & LEADERSHIP

- **Operating Systems (C):** Implemented a pthread-based quicksort with mutexes and condition variables, and contributed xv6 system-call entry points and a clone wrapper with pointer-argument validation.
- **Wisconsin Autonomous:** Integrated wheel-speed encoders with voltage-to-frequency converters on the competition rover and streamed real-time data to the onboard NVIDIA Jetson.
- **my-av:** Built a PyTorch CNN-GRU that predicts steering and speed from 1s video; trained on 33 hours of Comma2k19 on local CUDA and GCP Vertex AI with streaming inference.
