

EDUCATION

Carnegie Mellon University Expected May 2027

M.S. in Software Engineering | GPA: 4.0 / 4.0

Selected Coursework: Data Science for Software Engineering, Large Language Model Systems, Distributed Systems

University of Wisconsin–Madison May 2024

B.S. in Computer Science & B.S. in Computer Engineering | GPA: 3.72 / 4.0

Selected Coursework: Software Engineering, Large Language Models in Practice, Algorithms

WORK EXPERIENCE

NewsBreak May – August 2026

Full-Stack Engineer Intern Mountain View, CA

- Sole SwiftUI engineer and primary backend author for SportsBreak from an empty repository to 1.4K App Store ratings and 1,119 peak daily active users; shipped Firebase auth (Google, Apple, email) and a 72-event analytics catalog.
- Built the Python FastAPI / MongoDB backend from its first commit to 89 endpoints, modeling the data as 129 Pydantic models over 26 collections, with ~1,450 offline tests; cut a 25–30 request fan-out to one call on a shared cache 78× smaller than per-user keys.
- Shipped a personalized LLM morning digest to 5,026 users (~81% of the base), with every bullet linked to its source article.
- Shipped agentic search with RAG, a bounded tool-calling agent, and server-resolved citations; bare lookups skip the LLM, and deterministic entity resolution took logged queries from 0% to 100% P@1 after I measured and rejected embeddings.
- Designed and shipped a personalized LLM alert pipeline, evaluated it over 11 days of production shadow (4,100+ logged decisions), and cut filler 34% → 4%; retired my own first detector when production data showed it was 15 hours too slow.
- Deployed and owned the service in production on AWS EKS (Docker, Helm, Jenkins) from day 3, with Prometheus and Grafana.
- Introduced the team’s Jira backlog unprompted, wrote 34 contract-first API specs and ~10,000 lines of engineering docs, and onboarded the second engineer.

Haddee Education June – September 2025

Engineering Lead San Diego, CA

- Led an 8-intern team through Agile sprints to ship a React, Next.js, FastAPI, and Supabase web app from 0→1 on GCP App Engine.
- Designed the database schemas and REST APIs for its LangChain LLM features: resume parsing, improvement suggestions, and AI job matching.

ZenAI — MiraclePlus (Formerly YC China) 2023 Fall Batch September – December 2023

Full Stack Developer Beijing, China

- Sole engineer on a VC-backed startup’s LLM mock-interview web app, built from 0→1 in React, Next.js, Supabase, and PostgreSQL; owned auth, session state, and database interactions.
- Worked with recruiters so AI scoring matched real hiring, iterated from user-testing sessions, and demoed the product until three 200–500-person companies signed contracts.

SKILLS

Languages	Python, SQL, TypeScript, JavaScript, HTML, CSS, Go, Java, Swift
Full Stack	React, Next.js, FastAPI, REST APIs, PostgreSQL, Supabase, MongoDB, Firebase Auth, Stripe
AI/LLM	LangChain, RAG, hybrid retrieval, LLM tool calling / agents, MCP, Langfuse
Infra	AWS, GCP App Engine, Docker, Kubernetes (EKS), Helm, CI/CD, Prometheus, Grafana
Certifications	AWS Certified Solutions Architect – Associate, AWS Certified Cloud Practitioner

PROJECTS

- **codingplans:** Building a site that rates LLM coding plans. Tested Z.AI, MiniMax, and Kimi on KV caching, long context, and needle-in-a-haystack to show which nerfed caching or heavily quantized models.
