EDUCATION

Carnegie Mellon University

Expected May 2027

M.S. in Software Engineering | GPA: 4.0 / 4.0

Selected Coursework: Distributed Systems, Foundations of Software Engineering, Software Refactoring

University of Wisconsin–Madison

May 2024

B.S. in Computer Science & B.S. in Computer Engineering | GPA: 3.72 / 4.0

Selected Coursework: Software Engineering, Algorithms, Operating Systems, Computer Architecture

WORK EXPERIENCE

NewsBreak

May – August 2026

Full-Stack Engineer Intern

Mountain View, CA

- Sole SwiftUI engineer and primary backend author on consumer app [SportsBreak](#) (~6,000 installs, 1,119 peak daily active users, 1.4K App Store ratings); authored 344 pull requests across five repositories (340 merged).
- Built the FastAPI / MongoDB service layer from its first commit to 89 REST endpoints and 26 collections, with ~1,450 fully offline tests (1:1 with production lines) behind a ruff / pyright / pytest CI gate.
- Built server-driven UI over 27 widget types so a new catalog surface ships without an App Store release; unknown widget kinds drop instead of failing a page.
- Replaced a 25–30 request client fan-out with one backend call; redesigned a cache that could not hit (13.2 MB keyed per user) into a shared 10.9 MB catalog cache, 78× smaller and sized for a 512 MiB pod.
- Stood up containerized services on AWS EKS (Docker, Helm, Jenkins) on day 3 with 7 CronJobs; fixed a 5-day silent CronJob outage (ImagePullBackOff + Forbid concurrency) with paired job and scheduler deadlines.
- Diagnosed a 65% failure rate in another team's LLM pipeline via Langfuse traces as an unbounded reasoning loop hitting a 16,384-token ceiling, and sized a 2,048-token cap against observed successes.
- Migrated nine third-party integrations server-side so the iOS binary ships zero third-party API credentials; shipped Stripe web checkout behind a signature-verified, idempotent webhook.
- Introduced the team's Jira backlog unprompted, defined 34 contract-first API specs, wrote ~10,000 lines of engineering docs, and onboarded the second engineer.

Haddee Education

June – September 2025

Engineering Lead

San Diego, CA

- Led an 8-intern team through Agile sprints to ship a React, Next.js, FastAPI, and Supabase web app from 0→1 on GCP App Engine; designed the database schemas and REST APIs for its LangChain features.
- Broke down user stories, led PR reviews, and mentored interns on Git workflows, testing, and scalable code.

ZenAI — MiraclePlus (Formerly YC China) 2023 Fall Batch

September – December 2023

Full Stack Developer

Beijing, China

- Built a VC-backed startup's LLM mock-interview web app from 0→1 as the sole engineer in React, Next.js, Supabase, and PostgreSQL; owned auth, session state, and database interactions.
- Demoed the product and iterated with clients until three 200–500-person companies signed contracts.

RESEARCH EXPERIENCE

Control & Learning Group — Carnegie Mellon University

February – June 2026

Graduate Researcher | Advisor: Prof. Yorie Nakahira

- Developed an Online Adaptive Probabilistic Safety Certificate (PSC) with PhD researchers; outperformed Adaptive MPC in 3-DOF vehicle simulations under environmental uncertainty.

SKILLS

Languages	Java, Python, TypeScript, JavaScript, C, SQL, Go, Swift, HTML, CSS
Cloud & DevOps	AWS, GCP, Docker, Kubernetes (EKS), Helm, Jenkins, GitHub Actions, CI/CD, Langfuse
Stack	React, Next.js, SwiftUI, FastAPI, REST APIs, MongoDB, PostgreSQL, Stripe
Practices	Agile/Scrum, Jira, Git, Unit Testing, pytest, AWS Certified Solutions Architect – Associate

PROJECTS

- **my-av**: Built a PyTorch CNN-GRU that predicts steering and speed from 1s video; trained on 33 hours of Comma2k19 on local CUDA and GCP Vertex AI.
