EDUCATION

Carnegie Mellon University **Expected May 2027**
M.S. in Software Engineering | GPA: 4.0 / 4.0
Selected Coursework: Large Language Model Systems, Distributed Systems, Machine Learning

University of Wisconsin–Madison **May 2024**
B.S. in Computer Science & B.S. in Computer Engineering | GPA: 3.72 / 4.0
Selected Coursework: Operating Systems, Mobile Computing Laboratory, Computer Architecture, Algorithms

WORK EXPERIENCE

NewsBreak **May – August 2026**
Software Engineering Intern *Mountain View, CA*

- Sole SwiftUI engineer for SportsBreak (1.4K App Store ratings; peak DAU 1,119): 43,695 lines, 233 views, Sign in with Apple, a 72-event analytics catalog; shipped through three App Store rejections.
- Shipped ActivityKit Live Activities and a widget extension sharing one scoreboard module; found push-to-start had never worked because iOS drops a start push with no `aps.alert` while APNs returns HTTP 200.
- Built server-driven UI over 27 widget types so a new catalog surface ships without an App Store release; unknown kinds drop instead of failing a page.
- Shipped Catch Me Up, a personalized LLM morning digest (∼1,341 generations/day) viewed by 5,026 users (∼81% of the base); re-sourced it onto highlight clusters so bullets carry a source index (10/10 linked).
- Built a personalized LLM alert pipeline (embed → LLM-score → select → LLM same-story dedupe → APNs, ∼2 min, ∼1,200 LLM calls/day); cut filler 34% → 4%, with a 2/day cap holding over 11,745 user-days.
- Cut a 25–30 request client fan-out to one backend call and a home-load copy from 9.0 ms to 0.89 ms; re-keyed a per-user cache to a shared one 78× smaller to fit a 512 MiB pod.
- Root-caused dead-stripped ad-mediation adapters to `NSClassFromString` instantiation and proved the `-ObjC` linker fix with a +7.5 MB binary delta and 0 → 2 adapter symbols.
- Built the Python FastAPI backend from its first commit to 89 endpoints and ∼1,450 offline tests behind a ruff / pyright / pytest gate; moved nine third-party integrations server-side so the app ships zero API keys.

Haddee Education **June – September 2025**
Engineering Lead *San Diego, CA*

- Led an 8-intern team through Agile sprints to ship a Next.js, FastAPI, and Supabase app on GCP App Engine.
- Designed schemas and REST APIs for LangChain LLM resume parsing, suggestions, and AI job matching.

ZenAI — MiraclePlus (Formerly YC China) 2023 Fall Batch **September – December 2023**
Full Stack Developer *Beijing, China*

- Built the LLM mock-interview app from 0→1 as sole engineer in React, Next.js, and Supabase; owned auth, session state, and database interactions.
- Tuned AI scoring with recruiters to match real hiring; three 200–500-person companies signed contracts.

RESEARCH EXPERIENCE

Control & Learning Group — Carnegie Mellon University **February – June 2026**
Graduate Researcher | Advisor: Prof. Yorie Nakahira

- Mapped natural-language instructions to formal safety specs with multi-turn LLMs and implemented Bayesian estimators for real-time road-friction adaptation (LuGre tire models).

SKILLS

Languages	Swift, Python, C, Java, SQL, TypeScript, Bash
iOS	SwiftUI, ActivityKit, WidgetKit, APNs, Xcode, Swift Package Manager, App Store Connect
AI & Tools	LLM tool calling / agents, RAG, Langfuse, Claude Code / AI coding tools, Git, pytest
Backend & Infra	FastAPI, MongoDB, AWS, Docker, Kubernetes (EKS), Linux, CI/CD, Prometheus
Certifications	AWS Certified Solutions Architect – Associate, AWS Certified Cloud Practitioner

PROJECTS

- **OS coursework:** Implemented a pthread-based quicksort in C for UW–Madison operating systems coursework and contributed xv6 system-call entry points and a clone wrapper with pointer-argument validation.
