EDUCATION

Carnegie Mellon University **Expected May 2027**
M.S. in Software Engineering | GPA: 4.0 / 4.0
Selected Coursework: Distributed Systems, Foundations of Software Engineering, Software Refactoring

University of Wisconsin–Madison **May 2024**
B.S. in Computer Science & B.S. in Computer Engineering | GPA: 3.72 / 4.0
Selected Coursework: Software Engineering, Algorithms, Data Structure & Programming III, Operating Systems

WORK EXPERIENCE

NewsBreak **May – August 2026**
Full-Stack Engineer Intern *Mountain View, CA*

- Shipped search for SportsBreak: hybrid retrieval (substring, MongoDB `$text`, and bge vector legs fused by RRF with recency decay) that degrades to the surviving legs; an entity resolver that took real logged zero-result queries 0% → 100% P@1 at 0.4 ms; and one SSE answer endpoint with server-resolved citations, so the model cannot author a URL.
- Built the Python FastAPI / MongoDB backend from its first commit to 89 REST endpoints across 27 routers, with ∼1,450 fully-offline tests (1:1 with production lines) behind a ruff / pyright / pytest CI gate.
- Replaced a 25–30 request client fan-out with one backend call, and re-keyed a per-user cache that could never hit into a shared 10.9 MB catalog cache, 78× smaller and sized for a 512 MiB pod.
- Stood up production AWS EKS (Docker, Helm, Jenkins) on day 3; caught a stale ArgoCD app that would wipe Jenkins deploys and fixed a 5-day silent CronJob outage with paired job and scheduler deadlines.
- Debugged a 65% failure rate in another team's LLM pipeline (1,661-commit repo) via Langfuse traces; shipped a Stripe checkout with a signature-verified, idempotent webhook into DramaBreak's mature codebase.
- Sole SwiftUI engineer and primary backend author for SportsBreak (∼6,000 installs, peak DAU 1,119); built server-driven UI over 27 widget types so new catalog and search surfaces ship without an App Store release, and unknown kinds drop instead of failing a page. Authored 344 PRs (340 merged), wrote 34 contract-first API specs, and onboarded the team's next engineer.

Haddee Education **June – September 2025**
Engineering Lead *San Diego, CA*

- Led an 8-intern team through Agile sprints to ship a React, Next.js, FastAPI, and Supabase web app from 0→1 on GCP App Engine; designed schemas and REST APIs for LangChain resume parsing and AI job matching.
- Broke down user stories, led PR reviews, and mentored interns on Git workflows, testing, and scalable code.

ZenAI — MiraclePlus (Formerly YC China) F23 **September – December 2023**
Full Stack Developer *Beijing, China*

- Built a VC-backed startup's LLM mock-interview web app from 0→1 as the sole engineer in React, Next.js, Supabase, and PostgreSQL; owned authentication, session state, and database interactions.
- Iterated AI scoring and UI from user-testing sessions, then demoed the product and iterated fast with clients until three 200–500-person companies signed contracts.

SKILLS

Languages	TypeScript, JavaScript, Python, Java, SQL, Go, Swift, HTML, CSS
Full-Stack & Search	React, Next.js, FastAPI, REST APIs, hybrid retrieval, RRF, MongoDB, PostgreSQL
Cloud & Deploy	AWS, Kubernetes (EKS), Docker, Helm, Jenkins, GitHub Actions, CI/CD, GCP
Testing & Practices	pytest, Unit Testing, TDD, ruff, pyright, Git, Agile/Scrum, Jira
Certifications	AWS Certified Solutions Architect – Associate, AWS Certified Cloud Practitioner

PROJECTS & LEADERSHIP

- **codingplans:** Building a site that rates LLM coding plans; bought Z.AI, MiniMax, and Kimi plans and tested KV caching, long context, and needle-in-a-haystack to expose nerfed caching and heavy quantization.
- **my-av:** Built a PyTorch CNN-GRU that predicts steering angle and speed from 1 s video; trained on 33 hours of Comma2k19 on local CUDA and GCP Vertex AI, with streaming inference.
- **ECE Leadership & Engagement Fellow** (CMU, Aug 2026 – present): Own budgeting, marketing, and outreach for ECE student programs — company-sponsored hackathons, alumni events, and tech event outings.
